## Education

2008–2014 **Bachelor's degree**, Moscow Technical University of Communications and Informatics, Engineer.

## Experience

2013–nowday **Senior software developer**, Yandex, Moscow.

Work at Yandex.Browser team.

- Development and maintaining of several components of browser. Very high quality of code was reached using high density of tests coverage (unit, integration, performance) and code review.
- Also developing clang-based tools for improving code quality and reducing efforts from other team members for merging upstream changes.
- Prototyped, implemented, maintained and reviewed extensions API.
- Moved to infrastructure team to improve internal processes: increasing time of master being "green", reduce build times, increase tests coverage and stability.

2012–2013 **Software developer**, AST, Moscow.

Developed utilities for collecting information from remote hosts.

Almost all of them were written from scratch using plain C and were cross-platform.

2011–2012 **Software developer**, Paragon Software, Moscow.

Developed kernel subsystem of live handwritten text recognition software written in C++ for handheld devices.

## Interests

Functional programming	Time-to-time spend a weekend or two to hack around OCaml, Haskell and Erlang to see what is it about and how to use their knowledge in my day-to-day live and work.
Tennis	Started playing tennis when I was 13 and spent about 6-8 hours a day for this beautiful game, can't stop doing this now. Though now I spend much less time for tennis.
